rheumatoid arthritis, and ocular disorders comprises a kininogen domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to the screening, diagnosis and prognosis of breast cancer, for monitoring the effectiveness of breast cancer treatment in a human, comprising identifying the presence or absence of breast cancer-associated features (BF) or breast cancer-associated protein isoforms (BFIs). Antibodies derived from BF and BPIs may be useful for the treatment and screening of breast cancer, in particular metastatic breast cancer. The present sequence is the partial
                                                                                The present sequence is that of a C-terminal fragment of a novel anti-angiogenic D3 peptide (see AAY95408) derived from human high mol. W. Kinhogen (HX) domain 3 (see AAY95406). The full-length D3 peptide inhibits endothelial cell proliferation and thus possesses anti-angiogenic activity. It is an example of peptides of the invention (see AAY95405.26) that are analogues of certain sites in the HX domain 3. The peptides inhibit endothelial cell proliferation and may also induce endothelial cell apoptosis. Compositions including the peptides are used in claimed methods for inhibiting angiogenesis, inhibiting endothelial cell proliferation, and inducing endothelial cell proliferation, and inducing endothelial cell proliferation, and coular disorders characterized by undesired vascularization of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Screening, diagnosis of breast cancer and monitoring the effectiveness of breast cancer therapy, involves detecting breast cancer-associated features and breast cancer-associated protein isoforms
                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Partial sequence #20 of Breast Cancer-Associated Protein Isoform.

The method comprises preparing a database of polynucleotides and polypeptides of unknown functions, screening the database for a combination of nucleotides or amino acids indicative of the peptide with a particular function, and identifying polynucleotides and proteins which contain the peptide. The method is used to identify precursor peptides with an amidated C-terminus, especially polypeptide hormones, for studying physiologically active substances. The present sequence represents a peptide which was identified using the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Identifying peptide with selected function, useful particularly for C-amidated hormones, by screening database for combination of nucleic

Peptides comprising membrane transiting peptides useful for treating or preventing a virus infection, e.g., human immunodeficiency virus, herpes simplex virus and cytomegalovirus -
                                                                                           Membrane transiting peptide; virucide; antiviral; Herpes Simplex Virus; HSV; HIV; Human Immunodeficiency Virus; CMV; cytomegalovirus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to peptides comprising membrane transiting peptides with antiviral properties. The peptides are useful for treating or preventing a virus infection in a warm blooded animal, e.g., enveloped viruses such as human immunodeficiency virus (HIV), herpes simplex virus (HSV), cytomegalovirus (CMV) and non-enveloped virus. Preferably, the peptides are useful for treating or preventing infections from one or more HSVs. The antiviral peptides are used for treating viral infections of the skin or part of the oral or genital cavity. The present sequence is membrane transiting antiviral peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Stearoyl-ACP-desaturase; soybean; seed oil; vegetable oil; fatty acid; stearic acid; transgenic plant; crop improvement.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Stearoyl-ACP-desaturase N-terminal peptide (aa5-16).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAW64636-W64657 are peptides homologous to the amino acid sequence of a fragment of a pyrogenic exotoxin (PET), and derivatives of the peptide capable of eliciting protective immunity against toxic shock induced by PET or by a mixture of PETs. Such peptides are also capable of antagonising toxin-mediated activation of T-cells, inhibiting expression of pyrogenic toxin (PT)-induced mRNA encoded by IL-2, IFN-gamma or VAR-beta genes. The peptides may be used to prepare therapeutics or vaccines for the treatment of prophylaxis of toxin-mediated activation of T cells and elaciting protective immunity against toxic shock induced (especially food poisoning) and toxic shock caused by PETs. They can also be used for the treatment of harmful effects the peptides can also be used for alleviating toxic shock induced by PETs.
                                                                                                                                                                                                                                                                                     Enterotoxin B; SEB; pyrogenic exotoxin; PET; protective immunity; toxic shock; toxin-mediated activation; T-cell; antagonist; inhibitor; therapeutic; vaccine; food poisoning.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New peptide(s) derived from pyrogenic exotoxin - useful for, e.g. antagonising toxin-mediated activation of T cells and prevention or treatment of toxic shock caused by exotoxin(s)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                .;

the 100 kD nuclear ribonucleoprotein (nRNP) and the Sm B/B' polypeptide. These antigens are common in systemic lupus erythematosus (SIE) and closely related disorders. The RO-SSA family of proteins has been shown to have several molecular forms which are defined by the molecular weight of the antigen identified. The major form has a molecular weight of 60 kD and two additional forms have molecular weight of 60 kD and two additional forms have form has a molecular weight of 60 kD and two additional forms have molecular weights of 52 and 54 kD. La/SSB is also a member of this group of autoantibodies and binds small RNAs with a polyuridine terminus. La/SSB has been shown to be a 46-50 kD monomeric positive sera. La/SSB has been shown to be a 46-50 kD monomeric phosphoprotein which associates with RNA polymerase III transcripts. Anti-Sm antibodies may be directed against one or a combination of the polypeptides. B (26 kD), B (27 kD), D (13 kD), E/F (11 kD doublet) and G (less than 10 kD). These epitopes may be used for preventing, treating or screening autoimmune disorders, specially SLE or Sjogrens syndrome (SS). They bind to a human containing the unit body and may therefore be used as vaccines.
derived from the 60 kD Ro/SSA peptide, the La/SSB autoantigen,
                                                                                                                                                                                                                                                                                                                           41.1%; Score 23; DB 14;

                                                                                                                                                                                                                           Amino acids 5-16 (AAR82025) of the soybean leaf stearoyl-ACP-desaturase mature enzyme were used to design a set of degenerate DNA probes (AAT00401). The probes were utilized in the screening of soybean leaf cDNA expression libraries, leading to the isolation of a clone (AAT00395) coding for the precursor enzyme (AAR82024).

                          by AAAb population present in early stage in patient with SLE. The method is used for generating an animal model of SLE. It is useful can see the critical in the case of fective in treating autoimmune disorders. It is useful as a component in a diagnostic assay, as a therapeutic (vaccine to block the AAbs produced, by eliciting immune response), and in research on the possible causes of the autoimmune diseases. The method is used to interrupt the course of an autoimmune response, once autoimmunity against the autoantigen is established. The amino acid sequences are used to make agents for neutralising circulating antibodies or immobilised on substrates in extraocropreal devices for specific removal of AAbs. The reagents identified by using the method is useful as models for screening of compounds which induce autoimmunity. It is useful in diadricion of autoimmunity, suppress autoimmunity. It is useful in diadrosis of autoimmunity and as therapeutics for the treatment of autoimmune disorders. The present sequence is a peptide from human riboned the induction of autoimmunity suppress autoimmunity and as therapeutics for the treatment of autoimmune disorders. The present sequence is a peptide from human riboned the induction of autoimmunity and as therapeutics for the exemplification of the induction of autoimmunity and as therapeutics for the exemplification of the induction of autoimmunity and as therapeutics for the exemplification of the induction of autoimmune disorders. The present sequence is a peptide from human riboned the induction of autoimmune disorders. The present sequence is a peptide from human riboned the induction of autoimmune disorders. The sequence is a peptide from human riboned the induction of autoimmune disorders. The sequence is a peptide from human riboned the induction of autoimmune disorders are an early and as the autoimmune disorders. The sequence is a peptide from human riboned the induction of autoimmune disorders are an early and as the autoimmune disorders are an early and as the

human animal with non-immunoglobulin peptide which comprises an epitope immunoreactive with auto-antibody (AAb) from patient with SLE. The epitope includes a region of self-antigen which is bound by AAb population present in early stage in patient with SLE. The method is used for generating an animal model of SLE. It is useful for screening therapeutics effective in traating autoimmune disorders. It is useful as a component in a diagnostic assay, as a therapeutic for soreening the AAbs produced, by eliciting immune response, and in research on the possible causes of the autoimmune diseases. The method is used to interrupt the course of an autoimmune response, once autoimmunity against the autoantigen is established. The amino acid sequences are used to make agents for neutralising circulating antibodies or immobilised on substrates in extracorporeal devices for specific removal of AAbs. The reagents identified by using the method are useful in manufacturing and testing autoantigens. The method is useful as models for screening of compounds which induce autoimmunity, in diagnosis of autoimmunity and as therapeutics for the treatment of autoimmune disorders. The present sequence is a peptide from human ribon of the properties of the persent sequence is a peptide from human ribon of the properties of the semplification of the s
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Systemic lupus erythematosus; SLE; vaccine; immune response; therapeutic; autoimmune disorder; ribonucleoprotein; human; 60 kD Ro/SSA peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The patent discloses a specific method of generating an animal model
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Generating systemic lupus erythematosus animal model by immunizing non-human animal with non-immunoglobulin peptide having amino acid sequence of self-antigen bound by autoantibody population in early
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

sclerotic or cell proliferative disorders

thman animal with non-immunoglobulin peptide which comprises an epitope immunoreactive with auto-antibody (Aba) from patient with soft performed with auto-antibody (Aba) from patient with soft performed a region of self-antigen which is bound by AAD population present in early stage in patient with SLE. The method is used for generating an animal model of SLE. It is useful can seed for generating an animal model of SLE. It is useful can somponent in a diagnostic assay, as a therapeutic (vaccine to block the AADs produced, by eliciting immune response), and in research on the possible causes of the autoimmune response, once autoimmunity against the autoantigen is established. The amino action sused to interrupt the course of an autoimmune response, once autoimmunity against the autoantigen is established. The amino action sused to make agents for neutralising circulating antibodies or immobilised on substrates in extracorporeal devices for specific removal of AADs. The reagents identified by using the method areful as models for screening of compounds which induce autoimmunity, in adaptosis of autoimmunity, suppress autoimmunity. It is useful in diagnosis of autoimmunity and as therapeutics for the treatment of autoimmune disorders. The present sequence is a peptide from human ribonucleoprotein, 60 kD Ro/SSA. This peptide is used in the exemplification

New substantially pure heparin-binding growth factor polypeptides useful for affecting wound healing and tissue formation, where antagonists of the polypeptides are useful for, e.g. treating 

The invention relates to a substantially pure heparin-binding growth factor (HBGF) polypeptide (I kDa) that corresponds to the C-terminal end of a connective tissue growth factor (CTGF) protein. The HBGF polypeptides form pharmaceutical compositions for affecting wound healing and tissue formation. Antagonists of the polypeptides are useful for treating sclerotic or cell proliferative disorders, atherosclerosis or fibrotic conditions Diseases and conditions modulated by HBGF include arthritis, osteoporosis, and other skeletal disorders, burns. Fibrotic conditions include scleroderma, arthritis and liver cirrhosis. Cells treated are selected from epithelial (especially secretory), muscle (especially smooth or cardiac muscle), connective tissue cells) and endothelial (especially endothelial) cells. Each treatment may further comprise the use of growth factors selected from insulin-like growth factor (EGF), transforming growth factor (PDGF), epidermal crowth factor (EGF), transforming growth factor beta (TGF-beta) or basic fibrobiast growth factor (BGF). The biological effect of HBGF can be modulated using heparin at a concentration of 1-100 mg/ml. BBGF is used for promoting endometrial growth and development of placental membranes and promoting and maintaining pregnancy by facilitating endometrial. tumour; kidney; brain; bone; skin; ovary; breast; pancreas; colon; lung; cytostatic; gene therapy; antibody therapy; ribozyme; serum; blood; single chain monoclonal antibody; urine. 84P2A9-related protein; prostate; testis; tissue; cancer; leukaemia; New 84P2A9 gene and its encoded protein, useful for diagnosing and treating cancer, e.g. leukaemia and cancer of the prostate, testis, ; 0 Mitchell Query Match 41.1%; Score 23; DB 20; Length 9; Best Local Similarity 42.9%; Pred.                                                                                                                                                                                                                                                                                                                                                                             8
                                                                                                                                                                                                                                                                           ò
                                        The polypeptide sequences represent the 84P2A9-related protein and peptide fragments of the protein. 84P2A9 exhibits prostate and testis specific expression in normal adult tissue, but it is also aberrantly expressed in many cancers including leukaemia and tumnours of the prostate, testis, kidney, brain, bone, skin, ovary, breast, pancreas, colon and lung. The 84P2A9 polynucleotide, its related protein and peptide fragments and specific PCR primers are therefore useful for diagnosing and treating cancer. A vector comprising a polynucleotide which encodes a single chain monoclonal antibody, that immunospecifically binds to an 84P2A9-related protein, and a ribozyme capable of cleaving a polynucleotide having the 84P2A9 coding sequence, are both useful in the preparation of a composition for treating a patient with a cancer that preparation of a composition for treating a patient with a cancer that contror the level of 84P2A9 gene products in serum, blood, unine and contor the level of 84P2A9 gene products in serum, blood, unine and the presence of cancerous cells.
                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Virus with modified binding moiety specific for the target cells - used to deliver genes for gene therapy and cancer treatment
                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /label- X represents the remainder of the ScFv
kidney, brain or bone, or for eliciting an immune response

                                                              Displaying functional antibody fragments on the surface of recombinant retroviral particles could be used to target replication deficient virus to target cells for gene delivery. The binding moiety (eq. a ScPv) is pref. external to the receptor for its host cell and fused to the virus direct or indirect by a spacer antigen. Flusion C (AAQG4764 fused to CAAQG461) is at the end of third repetitive unit of the shaft (co-ordinates 31323-4 (sequence co-ordinates taken from ADRCOMPGE_1) of the Ad5 fibre. The sequence between the PstI and XhoI sites is unique to the ScFv used. The first 6 amino acid residues of the fusion A protein are from Ad5, the next 4 from the ScFv fragment used. XII represents the remainder of the

                                                                                     The invention relates to a substantially pure heparin-binding growth
factor (HBGF) polypeptide (1 kDa) that corresponds to the C-terminal end
of a connective tissue growth factor (CTGF) protein. The HBGF
polypeptides form pharmaceutical compositions for affecting wound healing
cc and tissue formation. Antagonists of the polypeptides are useful for
treating sclerotic or cell proliferative disorders, atherosclerosis or
fibrotic conditions. Diseases and conditions modulated by HBGF include
arthritis, osteoporosis, and other skeletal disorders, burns. Fibrotic
conditions include scleroderma, arthritis and liver ciribosis. Cells
treated are selected from epithelial (especially secretory), muscle
(especially smooth or cardiac muscle), connective tissue (especially
astrogila, fibroblast, osteoclast, osteoblast or chondrocyte cells) and
endothelial (especially endothelial) cells. Each treatment may further
comprise the use of growth factors selected from insulin-like growth
factor (IGFP), transforming growth factor (PDGF), epidermal growth
factor (EGF), transforming growth factor (PDGF), epidermal growth
factor (PGF), plangarin at a concentration of 1-100 mg/ml. BBGF is used
for proveries the concentration of plangaria may and decompaning the decompaning proveries and plangaria may and decompaning the decompaning proveries and plangaria may and decompaning the decompaning proveries and plangaria may and decompaning proveries and plangaria may and decompaning proveries and plangaria may and decompaning the decompaning proveries and plangaria may and decompaning proveries and plangaria may and decompaning the decompaning proveries and plangaria may an elected proveries and plangaria may an elected plangaria may an elected plangaria and and plangaria may are comp

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         for promoting endometrial growth and development of placental membranes and promoting and maintaining pregnancy by facilitating endometrial-trophoblast interaction. The present sequence represents a HBGF peptide fragment obtained by N-terminal sequencing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Peptides promoting activation of latent transforming growth factor
beta (TGF beta) - for screening potential drugs for treating
TGF-fssociated diseases such as cancer and atherosclerosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human latent transforming growth factor-beta promoting peptide #6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; latent transforming growth factor beta; TGF-beta; cancer; atherosclerosis, activity regulator; retinopathy; bone fracture; myocardial infarction; cerebral infarction; hepatic infarction; nephritis; HIV-associated kidney disease; rheumatoid arthritis.

Latent transforming growth factor beta (TGF-beta). The peptides have latent transforming growth factor beta (TGF-beta). The peptides have the formula R1-A-R2 (I) where R1 = H or (optionally substituted) alkanoyl, arylcarbonyl, heteroarylcarbonyl, alkoxycarbonyl, arkloxycarbonyl, alkoxycarbonyl, alkoxy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Macrophage recruitment; chemokine derivative; MCP-1; osteoporosis; monocyte chemoattractant protein-1; inflammation; atherosclerosis; HIV; MIDS; stroke; psoriasis; autoimmune disease; hypertension; endotoxaemia; basophil-mediated disease; myocardial infarction; acute ischaemia; rheumatoid arthritis; contraception.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 conjugates used for inhibiting chemokine induced activity and for treating e.g. stroke, vascular diseases, autoimmune diseases and tumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   chemokines which can be used to produce derivatives, agonists and antagonists which are then useful in disease treatment. The chemokines
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention concerns the identification of a number of

The peptides are taken up in the intestine through binding to specific lactoferrin receptors and are then transported through the circulation. A medicinal product of the peptide or fragment can be used for treating and/or prevention of infections (such as membrane), inflammations, colitis, and Candida infection on a mucosal membrane), inflammations and/or tumours. The peptides can also be used in food stuffs such as infant formula food. The peptides are also fungicidal and bactericidal and may also be used as preservatives. Even though native human lactoferrin have been shown to have desired anti-inflammatory anti-infections and anti-tumoural properties they cannot be used clinically on a broad basis because of high production
                          include sequences AAB15785-B15794, AAB15803-B15813 and AAB15831-B15848. These chemokine derivatives can be used to treat diseases such as autofundume diseases, atherosclerosis, osteoporosis, HIV infection and AIDS, psoriasis, inflammatory diseases, hypertension, basophil-mediated diseases, endotoxaemia, myocardial infarction, acute ischaemia and rheumatoid arthritis, and can be used to prevent strokes and as contraceptives. The coding sequences for the chemokines can be used in gene therapy for the same diseases, as well as in the production of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; lactoferrin; modification; infection; inflammation; tumour; food; infant formula; anti-inflammatory; anti-microbial; anti-tumour; urinary tract infection; colitis; Candida infection; fungicidal; bactericidal; preservative

The sequences given in AAR43391-562 are linear epitopes which are derived from the 60 kD Ro/SSA peptide, the La/SSB autoantigen, the 70 kD nuclear ribonucleoprotein (nRNP) and the Sm B/B, polypeptide. These antigens are common in systemic lupus coplypeptide. These antigens are common in systemic lupus erythematosus (SLE) and closely related disorders. The Ro/SSA family of proteins has been shown to have several molecular forms which are defined by the molecular weight of fow and two additional forms have molecular weights of 52 and 54 kD. La/SSB is also a member of this group of autoantibodies and binds small RNAs with a polyuridine terminus. La/SSB has been shown to be a 46-50 kD monomeric positive sera. La/SSB has been shown to be a 46-50 kD monomeric positive sera. La/SSB has been shown to be a 46-50 kD monomeric positive sera. La/SSB has been shown to be a 46-50 kD monomeric positive sera. La/SSB has been shown to be a 46-50 kD monomeric positive sera. La/SSB has been shown to be a 46-50 kD monomeric constitution of the polypeptides such a 46-50 kD monomeric combination of the polypeptides: B (26 kD). B' (27 kD), D' (37 kD), C' (37 kD),
                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          nuclear ribonucleoprotein; nRNP; Sm B/B'; polypeptide; antigen; D; systemic lupus erythematosus; SLE; autoantibody; U4/U6; U5; B; B'; RNA polymerase III; U1; U2; Sjogrens syndrome; SS; human; vaccine; ss.

                                                                                                                                                                                                                                                                                                                                                                                         δy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              of systemic lupus erythematosus (SLE), comprising immunising an interior of systemic lupus erythematosus (SLE), comprising immunising a non-human animal with non-immunoglobulin peptide which comprises an epitope immunoreactive with auto-antibody (Abb) from patient with SLE. The epitope includes a region of self-antigen which is bound by Abb population present in early stage in patient with SLE. The method is used for generating an animal model of SLE. It is useful conscreening therapeutics effective in treating autoimmune disorders. It is useful as a component in a diagnostic assay, as a therapeutic (vaccine to block the Abbs produced, by eliciting immune response), and in research on the possible causes of the autoimmune diseases. The method is used to interrupt the course of an autoimmune response, once autoimmunity against the autoantigen is established. The amino acid sequences are used to make agents for neutralising circulating antibodies or immobilised on substrates in extracorporeal devices for specific removal of AAbs. The reagents identified by using the method are useful in manufacturing and testing autoantigens. The method is useful as models for screening of compounds which induce autoimmunity, inhibit induction of autoimmunity and as therapeutics for the treatment of in diagnosis of autoimmunity and as therapeutics for the treatment of autoimmune disorders. The present sequence is a peptide from human ribo-
                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Systemic lupus erythematosus; SLE; vaccine; immune response; therapeutic; autoimmune disorder; ribonucleoprotein; human; 60 kD Ro/SSA peptide.
                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The patent discloses a specific method of generating an animal model
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Generating systemic lupus erythematosus animal model by immunizing non-human animal with non-immunoglobulin peptide having amino acid sequence of self-antigen bound by autoantibody population in early stage of disease
                                                                                                                                           ;

The sequences represented in AAR75013-25 are fragments of deletion mutants of the spacer region of human p55 tumour necrosis factor (TNR-R), shown in AAR75012. Expression of this receptor is regulated by shedding of the extracellular receptor fragment. The p55 TNR-R can be shed in response to different inducing agents, e.g. phorbol myristate acetate (PMA), depending on cell type. The only region of the receptor whose structure affects the shedding response is the spacer region in the extracellular domain. This region is located close to a site of cleavage of the molecule, and links the Cys rich module to the transmembranal domain. The sequences shown in AAR75026-47 are fragments of replacement mutations of the spacer region. These mutations were introduced in order correcte an inhibitor of a protease that is capable of cleaving the soluble TNR-R from the cell bound TNR-R. The relevant fragments of the successful inhibitors can be seen in AAR75017-9, AAR75025, AAR75033-5 and AAR75042-3. The protease inhibitors can be used for enhancing TNF

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

XI Spirochaeta aurantia flagellar filament polypeptides.";
X J. Bacteriol. 173:1357-1359(1991).
C -I- FUNCTION: COMPONENT OF THE CORE OF THE FLAGELLA.
C -I- SUBUNT: THE FLAGELLUM CONSISTS OF AN OUTER LAYER COMPOSED OF RIVE ARTICENTALLY RELATED POLYEPETIDES.
C -I- SUBCELLULAR LOCATION: Periplasmic flagellum.
CC -I- SIMILARITY: BELONGS TO THE BACTERIAL FLAGELLIN FAMILY.
Flagella; Periplasmic.
FW Flagella; Periplasmic.
